Postdoctoral fellow: Concordia Infant Research Lab (Dr. Krista Byers-Heinlein)

The Concordia Infant Research Lab, directed by Dr. Krista Byers-Heinlein, is seeking a postdoctoral fellow to join our dynamic and friendly lab. The lab is housed in the Psychology Department of Concordia University in Montreal, on the beautiful Loyola Campus. We study the development of bilingual infants and preschoolers across language, cognitive, and social domains. Our methods are diverse and include eye-tracking, LENA home recordings, direct observations of parents and children, and analysis of large-scale datasets.

The postdoctoral fellow will coordinate an NIH-funded longitudinal, two-site study investigating language development in bilingual infants and children, working in close collaboration with Dr. Casey Lew-Williams and the team at the Princeton Baby Lab. The postdoc will be encouraged to develop their own research ideas within the context of the lab.

Requirements:
- PhD in Psychology, Linguistics, Cognitive Science, or a related field (experience with infants and children is an asset)
- Excellent organizational and communication skills
- Strong computational, statistical, and technical skills (knowledge of R is an asset)
- Commitment to open and collaborative science practices
- Knowledge of French preferred

Start date is negotiable March 1, 2019 – Sept 1, 2019.

Participants should forward a cover letter, CV, copy of (unofficial) transcripts, and the names of three potential referees to Melanie Brouillard (kbh.coordinator@concordia.ca). Applications will be evaluated on a rolling basis starting February 15, 2019.
